

Some babies will also have a hearing assessment

Even though most babies pass the hearing screening, some babies will have a "refer result". This means the baby will need a hearing assessment. The hearing assessment is performed by an audiologist who is an expert in testing babies' hearing. Your regional Infant Hearing Program will arrange an appointment for you.

Most babies who receive a refer result have perfectly normal hearing. Debris in the ear canal or fidgeting during the screening are the most likely reasons for a refer result. However, if your baby does have a hearing problem, the audiologist will direct you to the services and supports that are available to help you and your child.

Regional Infant Hearing Programs

Ontario's Infant Hearing Program provides its services through the following regional offices:

Hamilton-Wentworth, Niagara, Brant and Haldimand-Norfolk
"Early Words / Premiers Mots"
905-385-7927 ext. 227
or 1-866-826-4327 ext. 227

INFANT HEARING PROGRAM

INFANT HEARING PROGRAM

It is important to know if your baby can hear

The first months and years of a baby's life are very important for developing language. Undetected hearing loss is one of the causes of delayed language development. Delayed language development can lead to behaviour and emotional problems and later, to problems in school.

Every year in Ontario, approximately three in 1,000 babies are born deaf or hard of hearing. Through the Ontario Infant Hearing Program these babies can be found very early and given the help they need to develop language.

Most deaf and hard of hearing children whose hearing loss is identified early, and who receive the support they need, will have the same chance to develop language skills as hearing children.

Hearing screening is available for your baby

All newborn babies in Ontario can have their hearing screened, either in the hospital when they are born, or at a community screening clinic. There is no charge for the screening. It is a simple, reliable process that is quick, completely safe and comfortable for your baby.

The technology used to screen your baby's hearing involves placing a small earphone in the baby's ear. Soft sounds are played through the earphone and the ear's response is measured and recorded. Your baby will probably sleep comfortably through the whole experience, and you will get the results right away.

If for some reason your new baby's hearing was not screened before you went home from the hospital, contact your nearest Infant Hearing Program listed on the back of this brochure.

Can your baby hear?

Developmental milestones

These developmental milestones show some of the skills that mark the progress of young children as they learn to communicate. There are also some tips on how you can help your child develop strong speech and language skills.

By 6 months

- turns to source of sounds
- startles in response to sudden, loud noises
- makes different cries for different needs – I'm hungry, I'm tired
- watches your face as you talk
- smiles and laughs in response to your smiles and laughs
- imitates coughs or other sounds – *ah, eh, buh*

By 12 months

- follows simple one-step directions - "sit down"
- looks across the room to something you point to
- consistently uses three to five words
- uses gestures to communicate – waves "bye bye", shakes head "no"
- gets your attention using sounds, gestures and pointing while looking at your eyes
- brings you toys to show you
- "performs" for attention and praise
- combines lots of sounds as though talking – *abada baduh abee*
- shows interest in simple picture books

By 24 months

- follows two-step directions – "Go find your teddy bear and show it to Grandma"
- uses 100 to 150 words
- uses at least two pronouns – "you", "me", "mine"
- consistently combines two to four words in short phrases – "daddy hat", "truck go down"
- enjoys being with other children
- begins to offer toys to peers and imitates other children's actions and words
- people can understand his/her words 50 to 60 per cent of the time
- forms words and sounds easily and effortlessly
- holds books the right way up and turns pages
- "reads" to stuffed animals or toys
- scribbles with crayons

Babies like it when you:

- Get down to their level so they can see your face. This tells them that you're interested in what they're doing and saying. It makes it easier to interact with you.
- Repeat the sounds they make. Babies enjoy making noises, and like it when you imitate them over and over.
- Sing and laugh, especially when you are feeding, bathing, and changing them. Remember to talk to your baby throughout the day about things you do and see – "Mommy's putting on her coat", "That's a big truck"
- Tell them the names of the objects they are looking at and playing with. Babies are interested in exploring and learning about new things, and like to hear what things are called.

By 9 months

- responds to his/her name
- responds to the telephone ringing or a knock at the door
- understands being told "no"
- gets what he/she wants through gestures e.g., reaching to be picked up
- plays social games with you e.g., peek-a-boo
- enjoys being around people
- babbles and repeats sounds – *babababa, duhduhduh*

By 18 months

- understands the concepts of "in and out", "off and on"
- points to several body parts when asked
- uses at least 20 words consistently
- responds with words or gestures to simple questions – "Where's teddy?", "What's that?"
- demonstrates some pretend play with toys – gives teddy a drink, pretends a bowl is a hat
- makes at least four different consonant sounds – *p, b, m, n, d, g, w, h*
- enjoys being read to and looking at simple books with you
- points to pictures using one finger

By 30 months

- understands the concepts of size (big/little) and quantity (a little, a lot, more)
- uses some adult grammar – "two cookies", "bird flying", "I jumped"
- uses more than 350 words
- uses action words – run, spill, fall
- begins taking short turns with other children, using both toys and words
- shows concern when another child is hurt or sad
- combines several actions in play – feeds doll then puts her to sleep; puts blocks in train then drives train and drops blocks off
- puts sounds at the start of most words
- produces words with two or more syllables or beats – "ba-na-na", "com-pu-ter", "a-pple"
- recognizes familiar logos and signs – McDonalds golden arches, stop sign
- remembers and understands familiar stories

Toddlers like it when you:

- Let them touch and hold books while you point to and name the pictures.
- Use real words instead of baby talk – "give me" instead of *ta ta* or "bottle" instead of *baba*.
- Take the time to listen to them – they want you to hear all of their new sounds, words and ideas.
- Give them simple directions to follow – "Go find your red boots".
- Use lots of different words when you talk to them – opposite words like up/down, in/out; action words like "running", "splashing", and descriptive words like "happy", "big", "little", "clean", "dirty".
- Encourage them to play with other children – at the library, play groups, park.
